### **Abstract**

In order to evaluate the effect of home economic education on life quality of farmwomen, the study was conducted to establish the life quality indicators of farmwomen and provide to utilize by home economic education extension and related researches. The Delphi technique questionnaire method was adopted and all indicators are amended and reviewed three times by 9 experts to set up the skeleton of indicator of life quality. There are four major aspects have been sorted out as below : (1) enhancement of the personal physical and mental development, (2)strengthening of the personal ability, (3)promotion of the interpersonal interaction and care and (4) upgrading the welfare of the family. There are 12 dimensions and 51 learning detailed items have been established in total. According to the results above, the application and instruction of life skills and knowledge are the most important course carcass in “life planning” dimension. In the “participate in community” dimension, it showed that farmwomen are ready to accept new ideas and willing to contact with the new events, and further become the modern women. In brief, the results of analysis and investigation above revealed the high identification and representation of these indicators were selected on promoting life quality of the individual or family. Those were also contribute to draft the key directions of future education policy and course content planning of the home economic extension.

**Key words:** Quality of life, Farmwomen
